

TTA ISO

High-tech automation solutions for food

Leverage automation to simplify your processes, enhance efficiency, and meet the food challenges of the future.

Securing tomorrow's resources

As the global population rises and climate pressures intensify, the world faces an urgent challenge: how do we produce more food with fewer resources? Arable land is shrinking, labor is scarce, and the demand for sustainable practices is more significant than ever.

In this era of transformation, the food sector stands at the forefront of a global shift, where technology, precision, and sustainability must come together to secure the future of food.

Turning even the most demanding challenges into breakthroughs

Tackle labor shortages and costs

In this era of transformation, the food sector stands at the forefront of a global shift, where technology, precision, and sustainability must come together to secure the future of food.

Maximize throughput

With advanced automation and AI-driven vision systems, you can streamline tasks like sorting, grafting, and harvesting. This means higher yields, fewer manual steps, and smarter use of your resources.

Ensure food safety

By limiting human interaction and controlling movement across hygiene zones, automation helps you safeguard food safety at every step. Fewer hands in the process means lower risk of contamination, more consistency, and a cleaner, more controlled production environment.

High-tech food automation solutions

At TTA-ISO, we're passionate about the food sector and its incredible potential to shape a more sustainable future in food production. That's why we develop advanced automation solutions tailored for greenhouse horticulture and CEA facilities. Our high-tech equipment supports the efficient production of soft fruits, leafy greens, herbs, and greenhouse-grown vegetables—crops that demand high precision and consistent quality.

By automating essential processes such as sowing, grafting, sorting, harvesting, and packing, we empower growers to scale operations, reduce dependence on manual labor, and meet the rising global demand for fresh and nutritious food.

FlexSorter-S

3k - 12k plugs per hour

Transplanter that combines transplanting and selecting.

MaxSorter

6k - 12k plugs per hour

The MaxSorter is a fully automated solution that transplants and sorts young plants into a maximum of four grades.

Midi

4k – 40k plugs per hour

The Midi is a high-speed transplanter designed for fast and accurate transplanting into trays, packs, pots, floats, and mobile gutters.

bHarvest

0,25-0,30 m/s

The bHarvest is an advanced harvester for indoor-grown crops, featuring multiple conveyors and easy side access for clean, efficient operation.

HarvAI[®]

Up to 450 vines ph

Tomato harvesting reinvented

The HarvAI[®] harvesting robot integrates precise ripeness detection, intelligent navigation, and seamless compatibility with existing greenhouse infrastructure. With a cycle time of 450 vines per hour and the capability for one operator to oversee multiple harvesting robots, it maximizes efficiency while minimizing crop damage.

GraftLine BC

4k grafted plants per hour

The world's first fully automated grafting machine.

ClipLine

4k clipped plants per hour

High-speed clipping solution processing up to 4,000 plants per hour, combining advanced vision technology with robotic precision for consistent, high-quality output.

To feed a growing world with fewer resources, we must tackle labor shortages, rising costs, and sustainability challenges head-on. Together, we can innovate to ensure a future where food production is efficient, accessible, and sustainable for everyone.

About TTA-ISO

Born from the merger of two pioneers, TTA and ISO, we are a force of innovation, driven by a shared vision: to remove the barriers that hold growers back. Labor shortages? Inefficiencies? Rising costs? We don't see these as obstacles— we see them as opportunities to create smarter, more sustainable automation solutions.

With a team of over 250 professionals across the Netherlands, North America, South America, Australia, and the Emirates, we provide global automation solutions.

Together, we transform ideas into technologies that empower our customers to grow smarter and more sustainably. From advanced robotics to AI-driven systems, our solutions are designed to grow beyond limits.
